

INTRODUCTION TO

Abzorb Mobile Broadband

Simplifying Business Communications

With more businesses offering hybrid working arrangements, it's important that you can provide your customers with the required connectivity to allow their teams to work remotely. In these situations, fast, dependable and reliable broadband services is a necessity. For settings where fixed-line services are not the best option, mobile broadband could be the perfect solution.

What are the advantages of mobile broadband?

4G and 5G mobile broadband is a reliable alternative to fixed-line broadband, where fixed line services are not available and appropriate. Mobile broadband provides your business customer with:

- Access to multiple mobile networks at the same time, with speeds of up to;
- 100Mbps download and 50 Mbps upload on 4G connectivity*
- 200Mbps download and upload with 5G connectivity.*

Where can mobile broadband be used?

As our mobile broadband is delivered using the three largest network providers, it's ideal for providing connectivity in:

- Rural business settings
- Suburban areas where fibre isn't available
- As a pre-ethernet service or back-up solution to existing ethernet.

If you're travelling around, it means that you don't have to worry about finding a Wi-Fi network, as mobile broadband uses the same signal as your mobile network – you're using for internet access instead of voice calls.

Connectivity for Mobile Broadband solutions is simple; you can connect using multiple devices, such as;

- A USB dongle
- A dedicated HUB (a battery or USB/ac powered unit that emits a Wi-Fi signal, often called a Mi-Fi unit).
- An LTE supported router.

All of these can be supported with a 'plug and play setup, you can even tether your mobile phone.

INTRODUCTION TO

Abzorb Mobile Broadband

Managed through a single portal

Along with our other telecom services, your mobile broadband requirements can be managed via our portal. We simplify unified communications by delivering end to end solutions to our partners through a single portal. Our portal eradicates the complexities of selling unified communications. It enables you to build a bespoke telecom solution for your customer, allowing you to automate day to day administrative tasks and provide alerts in near real time.

It allows you to manage your customers with complete flexibility and control, so whatever connectivity your customer requires, you'll be able to order, provision and manage it in one place.

The Abzorb Portal is web based and can be accessed from any location, on any device, via a single sign on. Our portal allows you to manage your wholesale connectivity requirements in one place, no multiple platforms or URLs.

What are the benefits of partnering with us?

If you partner with us, you'll benefit from:

- A portal which allows you to order, provision and manage your entire telecoms portfolio in one place
- Support, consultation and advice from staff with decades of experience to help build profitable, long-lasting solutions for your clients
- A highly trained support team who are here to support our channel partners. We don't use Interactive Voice Response (IVR) technology, so you can rest assured there'll always be someone here to help
- Flexible, comprehensive telecom solutions to support your customers' short and long-term requirements.

How can we can help?

We aim to simplify the ordering and fulfilment process for our reseller partners, allowing you to manage your entire wholesale proposition using just one platform, the Abzorb Portal. here is also the added benefit of white labelling services to your customer.

Our portal means that you can manage all of your mobile and unified communication requirements in a single place, giving you freedom and autonomy to deliver services and manage your customer relationships, your way.
